The global Mixed Refrigerant Refrigeration market size is predicted to grow from US\$ 10017 million in 2025 to US\$ 17452 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

Mixed Refrigerant Refrigeration (MR Refrigeration) refers to a refrigeration technology that uses a blend of two or more refrigerants with specific compositions to achieve efficient cooling. Different components evaporate and condense at different temperature ranges, enabling better temperature matching and improved thermodynamic efficiency. Compared with single-component refrigerants, mixed refrigerants offer lower energy consumption and superior performance in cryogenic and industrial cooling applications. The technology is widely used in LNG liquefaction, industrial refrigeration, air separation units, hydrogen liquefaction, and advanced cold-chain systems. The upstream of the mixed refrigerant refrigeration industry chain mainly includes suppliers of fluorochemical raw materials, hydrocarbon raw materials, industrial gases, and specialty chemicals, involving basic refrigerants such as methane, ethane, propane, isobutane, R32, R125, and R134a. The midstream mainly consists of mixed refrigerant producers, refrigerant formulation developers, and refrigeration equipment manufacturers, responsible for refrigerant ratio design, blending production, storage, transportation, and system integration. Downstream applications cover LNG liquefaction plants, natural gas processing units, air separation equipment, industrial refrigeration systems, cold chain logistics, commercial refrigeration, data center cooling, chemical production, and hydrogen liquefaction facilities. In recent years, with the global energy structure transformation and the growth of LNG trade, mixed refrigerant technology has been widely used in the field of natural gas liquefaction. C3MR (propane pre-cooled mixed refrigeration cycle), DMR (dual mixed refrigerant cycle), and SMR (single mixed refrigerant cycle) have become the mainstream refrigeration processes for large-scale

liquefied natural gas projects. At the same time, the trend of replacing low-GWP environmentally friendly refrigerants is driving the continuous introduction of new mixed refrigerants, promoting the development of the entire industry chain towards higher efficiency, greener practices, and greater intelligence.
