The global Mixed Signal System-on-Chip (MxSoC) market size is predicted to grow from US\$ 370410 million in 2025 to US\$ 813230 million in 2031; it is expected to grow at a CAGR of 14.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Mixed Signal SoC (MxSoC, in short) is a relatively new category in SoC, which is designed for mixed signal (handling both analog and digital purposes).

Smart sensor is one of the most exciting areas of Mixed Signal SoC design in today's market place. Many of these devices overlap areas already discussed. Mixed signal sensor SoCs are moving toward distributed intelligence in their sensor elements. This move is very prevalent in both the automotive and industrial automation market segments. These however, are examples where the deep sub-micron technologies often are not the best choice. For one thing the analog portion of the design tends to make up most of the die space and these markets demand mature, well-characterized processes. For this reason many of these devices fit quite well in 0.35 and 0.5 micron technologies.
