A gearbox is used to drive the rotating mechanism in a powerful mixer. The gearbox is installed in the mixing vessel and occupies 2/3 of the total height. The temperature of the mix can be as high as 200°C. The forces generated during stirring are borne in the axial and radial directions by special rolling bearings installed in the gearbox. The powerful mixer can operate continuously 24 hours a day, 7 days a week. Among them, the mixer gearboxes in Class 1 and Class 2 specifications can be particularly flexibly used in various equipment. The noise- and performance-optimized helical gear mesh ensures low sound pressure levels and high efficiency. Strong rigid housing construction withstands maximum loads.
