The global MLCC for 5G Base Station market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Multilayer capacitors consist of a monolithic ceramic block with comb-like sintered electrodes. These electrodes come to the surface at the face ends of the ceramic block where an electrical contact is made by burnt-in metallic layers. 5G communication can be used for high-speed processing of large capacity data in the high frequency range, but due to the characteristics of the high frequency range, many base stations are required. Moreover, compared to 4G LTE, the number of receiving antennas and components in 5G communication base stations increases, resulting in increased power consumption and heat generation. Therefore, the MLCC loaded on the 5G communication base station must have the characteristic of high capacity in order to minimize the actual installed area of parts and ensure stable supply of staff. In addition, in order to reduce power loss, high voltage products are required for the characteristics of base stations that use high operating voltage. At the same time, in order to operate normally in environmental changes such as temperature and humidity, high reliability is required.

5G is a key and cross-age technology that opens the era of the Internet of Everything, and all countries are grabbing market share. The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly. China is a leader in 5G technology.

According to the latest statistics from the Ministry of Industry and Information Technology, China newly added 887,000 5G base stations in 2022 (currently reaching 2.312 million, accounting for more than 60% of the world's total), and 110 cities in China have reached gigabit city construction standard. According to the Digital China Development Report (2022) released by the State Internet Information Office, by the end of 2022, China had built a total of 2.312 million 5G base stations, with 561 million 5G users, accounting for more than 60% of the world.
