The global Mo-Cu Alloy market size is predicted to grow from US\$ 841 million in 2025 to US\$ 1174 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

As a pseudo-alloy, Mo-Cu alloy is composed of molybdenum and copper that not melt in solid solution, and integrated each others. It is characterized by high thermal conductivity, low and adjustable coefficient of thermal expansion, non-magnetic, low gas content, good vacuum performance, good machining ability and outstanding properties in high temperature. It is widely used in machinery, electric power, electronics, electric vehicle?metallurgy and other industries.

Molybdenum as an alloy trace elements, can significantly improve the performance of high-temperature alloys such as high-temperature strength, so the future growth of high-temperature alloys is expected to drive long-term growth in molybdenum demand. The total demand for molybdenum alloy is driven by the manufacturing industry, with demand covering the automotive, energy, aerospace, military and other medium- and high-end fields. Therefore, the total amount of molybdenum alloy demand is closely related to the development of medium and high-end manufacturing industry, the structure of the view, including automotive (such as high-strength steel), energy (wind power - high-strength steel, oil and gas - corrosion-resistant oil well tubing / offshore platform components, etc., boiler turbine - heat-resistant alloys), aerospace (aviation engines and gas turbines - high-temperature alloys, etc.), the military (armor-piercing bombs, armored vehicles, etc.). With the rapid development of the manufacturing industry, the demand for molybdenum alloys is also growing rapidly.
