Although small, CGM can improve the quality of life of millions of diabetes patients worldwide. For example, in patients with Type 1 diabetes, the current routine method is fingertip blood sampling to detect blood sugar, which is essential every day. In fact, fingertip blood collection can only occur up to 7 times a day. But this can only obtain a single point in time snapshot of blood sugar. Unfortunately, this snapshot can only provide blood glucose values for a specific period of time, and cannot provide all-weather blood glucose values for diabetes patients. Diabetes patients also can not obtain the overall changes in blood glucose and the reasons for the changes, so they can not develop targeted sugar control programs in line with specific individuals, including diet, medication, exercise, etc.

In 2021, the market size of the global blood glucose monitoring industry will be US \$29.5 billion, an increase of 10.07% over the previous year. In 2021, the market size of the Chinese blood glucose monitoring industry will be US \$1.5 billion, an increase of 15.38% over the previous year. With the increase in the number of patients with diabetes, the market size of the blood glucose monitoring industry will gradually expand in the future. It is expected that the market size of the global blood glucose monitoring industry will reach US \$32.5 billion in 2022, and the market size of the Chinese blood glucose monitoring industry will be US \$1.7 billion.
