Mobile Cartridge Dust, Its basic structure consists of a box, a fan, a filter cartridge, a dust collector and a microcomputer control part. The dust-containing gas in the cartridge dust collector is passed by the fan through the air inlet (suction port). Dust cover) is sucked into the box and filtered through the filter cartridge. The dust particles are blocked on the surface of the filter cartridge, and the filtered purified gas is discharged through the air outlet. The entire dust removal and filtration process is the result of the comprehensive effects of gravity, inertial force, collision, electrostatic adsorption, sieving, etc. Mobile Cartridge Dust Collectors are widely used in dust removal and dust recovery in biological, chemical, food and other industries; adsorption treatment in smoke and smoke industries, as well as purification in electronics, mechanical casting, building materials, ceramics, loading and unloading, mining, metallurgy and other industries.
