The global Mobile Charging Equipment market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

With the vigorous development of new energy vehicles in China, the anxiety about cruising range is gradually replaced by energy supplement anxiety. The charging problem is considered to be the 'last mile' of the promotion of new energy vehicles, and it is very important for the popularization and development of new energy vehicles. At present, a new type of energy replenishment mode in the market - mobile power replenishment, is emerging. This mode can combine some of the advantages of fast charging and battery replacement. From the point of view of the design principle, this is a charging station that can be moved at any time, which is equivalent to the mobile power supply of our mobile phone, which can ensure that it can be charged anytime and anywhere. At present, in the market, there have been a variety of mobile power supply solutions, such as mobile energy supply vehicles, mobile energy storage vehicles, mobile charging robots and other solutions.

The mobile power supply equipment is equivalent to a small 'charging station'. As a distributed energy storage power supply or emergency power supply, its function is to charge electric vehicles in an emergency anytime and anywhere. The mobile power supply equipment can use the fast charging mode. In an emergency, it can charge the electric vehicle for 10 minutes, and it can continue driving for 20-40km.
