A mobile fume extraction system is a portable device designed to capture and remove harmful fumes, dust, and airborne contaminants generated during industrial processes, welding, soldering, or other activities. These systems typically consist of a compact unit equipped with a suction fan or blower, a flexible extraction arm or hose, a filtration system, and a collection container. The extraction arm or hose is positioned near the source of fumes, allowing the system to capture contaminants directly at the point of generation. The suction fan draws the contaminated air through the extraction arm and into the filtration system, where particulates and gases are removed or filtered out. Clean air is then discharged back into the environment, while captured contaminants are collected in the container for safe disposal or recycling. Mobile fume extraction systems provide a flexible and efficient solution for maintaining clean air quality in various industrial and manufacturing environments, protecting workers' health and safety, and ensuring compliance with occupational health and safety regulations.

The global Mobile Fume Extraction System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
