In 2025, the global mobile gas pressure alarm production capacity was about 1.2 million units, and the gross margin was about 22.3%. A Mobile Gas Pressure Alarm is a safety device used to monitor gas pressure in gas systems. It mainly consists of sensors, an alarm system, and a display interface, and is used to detect and alarm gas leaks or pressure abnormalities, thereby improving workplace safety. The upstream of the mobile gas pressure alarm includes pressure sensors, gas detection sensors, and communication modules. The midstream consists of mobile gas pressure alarm manufacturers, and the downstream is mainly applications in residential, commercial, and industrial use.

Currently, the global market for mobile gas pressure alarms is in a steady growth phase, driven by continuously strengthened gas safety regulations across countries and a general rise in end?user safety awareness. The application scenarios of these devices are rapidly expanding from traditional industrial settings to commercial establishments and residential households. On the technology front, products are evolving toward intelligence, wireless connectivity, and high?precision sensing, with IoT?enabled portable alarms gradually becoming mainstream, enabling remote monitoring and real?time alerts. At the same time, the market faces common challenges such as inconsistent product standards and the need for improved sensor longevity and reliability. Overall, competition within the industry is intensifying, yet no absolute monopoly has been formed; various manufacturers hold distinctive advantages in
