A Mobile ICU (Intensive Care Unit) is a highly specialized, transportable medical facility designed to provide advanced critical care services outside of traditional hospital settings. Equipped with intensive care-level medical equipment such as ventilators, cardiac monitors, defibrillators, and medication delivery systems, these units are housed in vehicles (ambulances, helicopters, or fixed-wing aircraft), trailers, or expandable structures, allowing rapid deployment to emergency sites, disaster zones, or during patient transfers. They enable continuous monitoring and treatment of critically ill or injured patients—including adults, children, and newborns—while in transit or at temporary locations. Mobile ICUs may be categorized by transport mode (vehicle-based for rapid response, trailer-based for larger, stationary setups), expandability (modular designs that can increase workspace), or specialized care focus (e.g., pediatric or neonatal units with age-specific equipment). This flexibility ensures critical care reaches patients in remote areas, during mass casualty events, or when transferring between healthcare facilities, bridging gaps in care and improving survival rates for vulnerable populations.

United States market for Mobile ICU is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
