Abstracts

The global Mobile ID Wallet market size is predicted to grow from US\$ 319 million in 2025 to US\$ 836 million in 2032; it is expected to grow at a CAGR of 15.1% from 2026 to 2032.

A Mobile ID Wallet is a digital wallet that securely stores and manages a person's identity-related information on their smartphone. It is part of a broader trend toward digitizing government-issued IDs (like driver's licenses or passports) and other credentials (such as healthcare information or payment details) for easier, more secure, and portable access.

Many countries are now issuing digital versions of national IDs, driver's licenses, and passports. For example, countries like the U.S. (with states rolling out digital driver's licenses), Estonia (with its e-Residency program), and Singapore are pioneers in government-backed digital identity. Mobile ID wallets are increasingly being used to access government services such as tax filings, voting, and social security, creating a smoother and more efficient interaction with public services. Growth in Financial Services and Digital Payments is another key driver for the market. As mobile wallets like Apple Pay and Google Pay expand, the integration of digital ID credentials alongside payment cards creates an all-in-one solution for users to manage both identity and transactions securely.
