The global Mobile Identity and Access Management market size is projected to grow from US\$ 890.8 million in 2022 to US\$ 1708.6 million in 2029; it is expected to grow at a CAGR of 9.8% from 2023 to 2029.

The rise of remote work and the growing mobile workforce have led to the widespread use of mobile devices for work-related tasks. Employees are increasingly using their smartphones and tablets to access corporate resources and applications. This trend, coupled with the BYOD approach, necessitates robust Mobile IAM solutions to ensure secure access to corporate data and applications from mobile devices.

The proliferation of mobile applications, both for internal business use and customer-facing purposes, has increased the need for effective IAM solutions. Organizations require streamlined and secure methods to manage user identities, authentication, and authorization across various mobile applications and services.

Mobile devices introduce unique security challenges due to their portability, increased vulnerability to loss or theft, and the potential for unauthorized access. Mobile IAM solutions provide authentication mechanisms, multi-factor authentication (MFA), and access controls to mitigate security risks associated with mobile devices and protect sensitive data.
