The report requires updating with new data and is sent in 48 hours after order is placed.

Mobile Imaging Systems can quickly acquire photographic images and confirm them after a few seconds of exposure, eliminating the complicated procedures such as traditional film processing and IP board information reading. The images can be processed on-site, network transmission, and printing can be performed efficiently, quickly, and more directly. The lightweight, modest environmental demands, flexibility and small footprint of portable units make them an attractive alternative for many clinical needs.
