The global Mobile Laminar Air Flow (MLAF) Trolley market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Mobile Laminar Air Flow (MLAF) Trolley is a type of air filtration device that is used in cleanrooms and other controlled environments. It is similar to a cleanroom LAF unit, but it is designed to be portable and can be moved from one location to another within the cleanroom. The LAF cart typically consists of a fan, a filter, and a diffuser, and it is mounted on wheels or casters for easy movement. The fan pulls air into the LAF cart, and the filter removes contaminants from the air. The diffuser then creates a flow of clean, filtered air that is directed toward a specific area in the cleanroom. Cleanroom LAF carts are commonly used in industries such as semiconductor manufacturing and pharmaceuticals, where maintaining the cleanliness of the air is critical. They are typically used to create a flow of clean air over specific areas in the cleanroom, such as workstations or equipment, to protect sensitive materials or products from contamination. Because they are portable, cleanroom LAF carts can be easily moved to different locations within the cleanroom as needed.
