A mobile air supply device is a type of high-pressure air-supplied long-tube respirator, which is a convenient externally supplied respiratory protection equipment. The entire device consists of five independent components: a chassis assembly, a gas cylinder sales unit, an air supply hose, a Y-shaped three-way joint, and a long-tube respirator. These components can be organically combined to form an external air supply device that provides respiratory protection. It uses compressed air from gas cylinders as the air source, which is regulated by the gas collection and pressure reduction device on the chassis assembly. The air is then delivered through the air supply hose to the respirator's face mask for the operator to breathe, effectively protecting the respiratory system of the operator.

The global Mobile Long Tube Respirator market size is projected to grow from US\$ 234 million in 2024 to US\$ 295 million in 2030; it is expected to grow at a CAGR of 3.9% from 2024 to 2030.
