The global Mobile Metal Shredder market size is predicted to grow from US\$ 548 million in 2025 to US\$ 749 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

A mobile metal shredder is an industrial device integrated onto a tracked or wheeled mobile chassis. It possesses complete feeding, crushing, and conveying functions, requiring no complex foundation construction. It can be quickly relocated using its own power or traction device, designed for on-site, nearby crushing of scrap metal (such as automotive, appliance, and industrial waste). The core demand for mobile metal shredders stems from the rigid requirement of 'on-site processing' of scrap metal to maximize economic benefits and operational flexibility. It primarily serves scenarios where building a fixed crushing plant is impossible or unsuitable (such as scattered scrap car dumps, large factory interiors, building demolition sites, or remote areas), aiming to crush and reduce the volume of large-volume metal scrap on-site, directly producing high-density, easily transportable 'furnace material' fragments, thereby completely eliminating the long-distance transportation costs and logistical hassles of transporting waste from its source to a fixed processing plant. Its upstream supply chain mainly consists of heavy-duty mobile equipment manufacturing, involving the integrated manufacturing of special trucks/tracked chassis, high-power on-board diesel generator sets or power systems, heavy-duty crushing main units (hammer/impact rotors), and intelligent hydraulic and control system suppliers; the downstream directly connects the metal scrap generation and recycling ends, including automobile dismantling yards, metal processing plants, engineering contractors, scrap traders, and steel smelters that ultimately receive the crushed material. In 2025, the production of mobile metal shredder is estimated at approximately 8,000 units, with an average selling price of approximately US\$70,000 per unit, a gross profit margin of approximately 30%, and a

single-line capacity of approximately 200 units per year.

United States market for Mobile Metal Shredder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
