The global Mobile Phone Cooling Component market size is projected to grow from US\$ 618.3 million in 2022 to US\$ 1111.8 million in 2029; it is expected to grow at a CAGR of 8.7% from 2023 to 2029.

The mobile phone cooling component market is primarily driven by factors such as the growing adoption of advanced processors, increased multitasking capabilities of smartphones, and the rising popularity of mobile gaming. These factors contribute to higher heat generation within mobile devices, necessitating the implementation of efficient cooling solutions.

The market offers various cooling components and technologies, including heat pipes, thermal pads, heat sinks, graphite sheets, and vapor chambers. These components are often integrated into the phone's design during the manufacturing process or added as aftermarket accessories to enhance cooling performance.

Mobile phone cooling components are essential for managing heat generated by the phone's internal components, such as the processor (CPU), graphics processing unit (GPU), and battery. As smartphones have become more powerful and capable of performing intensive tasks, they generate more heat, which can affect performance, battery life, and overall user experience.
