A mobile phone HDI mainboard is a high-density PCB used in smartphones to support complex electronic systems. By utilizing microvias, buried vias, fine lines, and multi-layer structures, HDI PCBs enable high-density routing and superior electrical performance. Compared to traditional PCBs, HDI boards offer smaller size, higher integration, and better signal integrity, supporting advanced components such as processors, memory, RF modules, and multi-camera systems. They are a critical foundation for achieving compact, high-performance, and multifunctional smartphone designs.

The upstream of mobile phone HDI PCBs includes copper-clad laminates (CCL), copper foil, resin materials, drilling/plating chemicals, and manufacturing equipment. Representative suppliers include Rogers Corporation, Shengyi Technology, and Panasonic, with chemical and equipment providers such as Atotech and Hitachi High-Tech. The midstream consists of HDI PCB manufacturers like Unimicron, Compeq Manufacturing, and TTM Technologies. Downstream are smartphone OEMs such as Apple, Samsung Electronics, and Xiaomi. The industry chain is highly technology-intensive, combining advanced materials, precision manufacturing, and consumer electronics integration.
