ToF (Time-of-Flight) is a 3D sensing technology that measures the flight time of light to calculate the distance and depth between objects. It is a technology that recognizes the three-dimensional effect, spatial information, and movement of an object by calculating the distance to the object after measuring the time of the reflected signal by sending infrared wavelengths to the object, so it is applied to augmented reality (AR) and virtual reality (VR). ToF sensor must be with Driver IC for chip driving.
