Mobile rail flash welding machine is a device used for welding railway rails, which can generate high-temperature arcs on the surface of the rails and weld two rails together. This type of equipment usually has mobility, can move freely on railway lines, and can quickly and efficiently complete welding tasks. Flash welding is a commonly used welding method that melts the surface of the steel rail by heating it with an arc, and then uses pressure to connect the two rails together to form a continuous track. This welding method has the advantages of high weld quality, high efficiency, and easy operation, and is therefore widely used in railway construction and maintenance.
