The report requires updating with new data and is sent in 48 hours after order is placed.

Mobile satellite services (MSS) refers to networks of communications satellites intended for use with mobile and portable wireless telephones. There are three major types: AMSS (aeronautical MSS), LMSS (land MSS), and MMSS (maritime MSS).

The increase in demand for mobility, rise in integration between mobile and satellite technology, and advancement in digital technology majorly drive the MSS market. However, low available bandwidth and poor quality of voice and data in inadequate signal conditions, and increase in government regulations on the use of satellite technology restrict the market growth.

Growth in trend of Internet of Things (IoT), allocation of additional bandwidth for MSS, and increase in competition in the Internet service market create abundant growth opportunities. However, lack of assurance for the reliability of MSS over different regions is the key challenge for MSS market growth.

Over the next five years, LPI(LP Information) projects that Mobile Satellite Services will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
