A stroke CT ambulance, also known as a mobile stroke unit or mobile stroke ambulance, is an ambulance designed for people with acute ischemic stroke (AIS). It is equipped with a small mobile CT scanner, related inspection equipment, monitoring equipment and information support system. This kind of ambulance can provide CT diagnosis, thrombolysis therapy and other services on the spot, aiming to shorten the treatment time and win the 'golden time' of treatment.

The Mobile Stroke Unit has changed the traditional stroke treatment process by moving CT diagnosis and thrombolysis from the hospital to the field. This mode can realize the function of 'getting on the bus and being admitted to the hospital', maximizing the time for patients, especially in the first aid of stroke, time is of the essence.

In China, stroke is the leading cause of death and disability in adults. The emergence of mobile stroke units has significantly improved the efficiency and effectiveness of AIS treatment, especially in the pre-hospital stage. For example, with a mobile CT stroke ambulance, medical staff can perform rapid CT scans and thrombolytic therapy in the ambulance, so that treatment can be started before they reach the hospital, significantly reducing mortality and disability rates due to delays in diagnosis and treatment.

The global Mobile Stroke Ambulances With CT Scanner market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
