The global Mobile Video Colposcope market size is predicted to grow from US\$ 152 million in 2025 to US\$ 224 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

The development trend for mobile video colposcopes is focused on improving portability, ease of use, and image quality. Mobile video colposcopes are becoming smaller and more compact, allowing for easier transportation and use in various settings. This trend is driven by the need for portable devices that can be used in remote areas or during fieldwork. Many mobile video colposcopes now come with wireless connectivity options, such as Bluetooth or Wi-Fi, enabling seamless integration with smartphones, tablets, or computers. This allows for real-time image transmission, remote consultations, and data sharing. Advances in imaging technology have led to the development of mobile video colposcopes with higher resolution cameras. This improves the visualization of cervical abnormalities and enhances diagnostic accuracy.
