Modified Atmosphere Packaging Material is a special packaging material used to extend the shelf life of perishable products such as food. This kind of packaging material is designed to adjust the composition of the atmosphere inside the package, usually by controlling the levels of oxygen, carbon dioxide and humidity, to slow down the rate of food spoilage.

Modified Atmosphere Packaging Material can help maintain the freshness and taste of food by reducing oxygen exposure and delaying food oxidation and bacterial growth. This technology is widely used to package fresh meat, seafood, vegetables, fruits, deli

and dairy products to extend their shelf life, reduce food waste and provide longer storage and delivery options. Modified atmosphere packaging materials help improve food safety and quality and are of great significance to both supply chain management and consumers.
