The global Modified Composite Plastics market size is predicted to grow from US\$ 127173 million in 2025 to US\$ 153253 million in 2032; it is expected to grow at a CAGR of 2.1% from 2026 to 2032.

Modified composite plastics are materials whose properties are optimized through physical or chemical methods for general-purpose or engineering plastics. Through modification techniques such as filling, blending, reinforcement, toughening, flame retardancy, and cold resistance, they significantly improve the mechanical strength, toughness, heat resistance, and flame retardancy of plastics, enabling them to meet a wider range of application needs.

QYResearch analysts point out that the current capacity utilization rate of modified composite plastics in development is low, with almost no significant new capacity additions, which is completely different from developing countries such as China and India. Currently, global demand for modified composite plastics exceeds 70 million tons, with a global market size exceeding US\$130 billion.
