The global Modified Plastics for Electronic and Electrical market size is predicted to grow from US\$ 5111 million in 2025 to US\$ 7383 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Modified plastics play a crucial role in the electronic and electrical industry, where specific performance requirements, such as electrical conductivity, flame resistance, and thermal stability, are essential.

Modified plastics play a crucial role in ensuring the safety and stability of electronic and electrical products when compared to ordinary plastics. Their enhanced properties, including increased toughness, flame resistance, high-temperature resistance, aging resistance, and scratch resistance, are of paramount importance. With these attributes, modified plastics have largely replaced traditional metals and inorganic non-metal materials, becoming a primary material for electronic and electrical products. In the electrical industry, modified plastics find extensive applications in transformers, electrical wires and cables, high and low-voltage electrical components, power capacitors, complete sets of high and low-voltage switchgear, relay protection devices, and automation control systems. As the emphasis on safety and health increases globally, strict requirements for the fire safety of plastic materials have been proposed. The demand for high-end modified plastics is expected to continue growing.
