Modified Polymer Material refers to polymer materials that have been physically, chemically, or structurally modified to enhance specific performance characteristics. These materials are produced by adding functional additives, reinforcing fillers, blending different polymers, or applying special processing technologies to improve properties such as strength, heat resistance, flame retardancy, impact resistance, conductivity, and durability. They are widely used in automotive, electronics, packaging, construction, medical devices, and industrial applications. The product scope includes modified plastics, engineering polymer materials, and functional polymer compounds, excluding basic unmodified polymers.

The industry chain of Modified Polymer Material includes upstream raw materials, midstream modification processing, and downstream application industries. Upstream suppliers provide base polymers, additives, fillers, reinforcing materials, and chemical modifiers. Midstream manufacturers conduct compounding, blending, extrusion,
