The global Modular Edge Data Centers market size is predicted to grow from US\$ 7806 million in 2025 to US\$ 26203 million in 2032; it is expected to grow at a CAGR of 19.0% from 2026 to 2032.

In 2025, the global Modular Edge Data Center market records annual deployments of approximately 19,000 units against a global production capacity of about 23,000 units, with an average unit price USD 420,000 and an average gross margin of around 36%. Modular Edge Data Centers are prefabricated, self-contained data-center units designed to deliver compute, storage, and networking capacity close to end users or data sources, enabling low-latency processing for applications such as 5G, IoT, AI inference, industrial automation, and content delivery. The supply chain typically begins upstream with semiconductor providers (CPUs, GPUs, AI accelerators, NICs), memory and storage manufacturers, power electronics suppliers (UPS modules, power distribution units, inverters), and thermal-management vendors (air- or liquid-cooling systems). Midstream players include modular infrastructure OEMs and system integrators that design and assemble standardized modules—integrating IT racks, cooling, power, security, and monitoring into factory-built enclosures or containers—often in partnership with enclosure, steel fabrication, and electrical component manufacturers. Downstream, these solutions are delivered through EPC firms, telecom operators, cloud and colocation providers, and industrial end users, followed by deployment, commissioning, and lifecycle services such as remote monitoring, maintenance, and upgrades, forming a fast-deployment, scalable, and geographically distributed edge computing ecosystem.

United States market for Modular Edge Data Centers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
