The global Modular Industrial Bag Dust Collector market size is predicted to grow from US\$ 3664 million in 2025 to US\$ 5433 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2025, global Modular Industrial Bag Dust Collector reached approximately 31.1 K Units, with an average global market price of around 120.6 K USD/unit.

A Modular Industrial Bag Dust Collector refers to a highly flexible, standardized industrial dust removal device composed of prefabricated functional modules including filter bag units, ash cleaning systems, air inlet/outlet modules, and intelligent control cabinets; it features on-demand assembly and expansion by adding or reducing modules to match different air volume requirements, uses filter bags as core media to capture particulate matter of 0.3 μ m and above with a filtration efficiency of over 99.5%, and is characterized by easy installation, convenient maintenance, and strong adaptability to various industrial dust-laden gas treatment scenarios.

The global demand for Modular Industrial Bag Dust Collectors is primarily driven by increasingly stringent environmental protection policies mandating ultra-low emission transformation in traditional industries such as steel, cement, and chemical engineering, the rapid growth of clean production needs in emerging sectors including new energy and biopharmaceuticals, and the approaching replacement cycle of aging dust removal equipment; business opportunities lie in developing intelligent products integrated with IoT and AI technologies for real-time monitoring and dynamic optimization of filtration efficiency, R&D of special filter bag materials to adapt to high-temperature, corrosive, and explosive dust conditions, expanding market share in emerging economies such as Southeast Asia and the Middle East by leveraging cost advantages and international

certification compliance, and providing full-life-cycle services including equipment maintenance, filter bag replacement, and emission data analysis.
