## Abstracts

The global Modular Matrix Switch market size is predicted to grow from US\$ 1182 million in 2025 to US\$ 1703 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2025, the global sales of modular matrix switches in various application scenarios are estimated at approximately 323,000 units, with the average price of mainstream models around USD 3,740 per unit, and a comprehensive gross profit margin of approximately 27%-35%. Integrated matrix switchers for conference systems and education account for the largest share of shipments, while high-end command center and broadcast/event production products have significantly higher average selling prices. A modular matrix switch is a core device for centralized signal switching and format conversion in professional AV and conferencing systems. It typically integrates various video/audio input and output interfaces (such as HDMI/DP/VGA/HDBaseT, analog/digital audio, etc.), a signal switching matrix, scaling/format conversion, audio embedding/de-embedding, and control interfaces within a single chassis. It is used to flexibly route signals from multiple sources such as computers, players, cameras, and video conferencing terminals to multiple display/processing devices such as projectors, LED screens, video walls, recording and streaming encoders in a conference room, classroom, command center, or multi-purpose hall. Typical parameters include: input/output sizes ranging from 4?2, 8?4, 8?8 to 16?16/32?32, supporting resolutions from 1080p to 4K60 4:4:4 (some high-end models support HDR/4K120 or 8K readiness), video bandwidth of 10–18 Gbps/channel, support for HDCP 2.2/2.3, audio support for analog balanced/unbalanced and digital S/PDIF, built-in or external DSP mixing/equalization, and control interfaces including RS-232, Ethernet, IR, GPIO, and protocols compatible with mainstream control systems (such as Crestron, AMX, etc.); the power consumption is generally 20–120 W, and the chassis specifications are

mostly 1U–3U rack-mountable or wall/under-desk mountable.

The growth of the modular matrix switch market stems from several factors. Firstly, the continuous increase in the number of global meeting spaces and multimedia scenarios, coupled with the long-term coexistence of offline and online meetings, is driving system upgrade demands. The digital transformation of enterprises, hybrid work models, and the normalization of online education have led to a need for many small and medium-sized meeting rooms and educational spaces to upgrade from 'single projector + simple switching' to integrated scenarios with 'multi-source access + remote conferencing + recording/live streaming,' directly boosting the installation of multi-format matrices in renovation projects. Secondly, government and public institutions' command centers, emergency platforms, and transportation and energy monitoring centers are increasingly reliant on centralized monitoring and flexible routing of multiple signal sources, providing stable demand for medium and large-scale matrix platforms. Simultaneously, the trend towards larger, higher-resolution, and multi-screen display terminals means that traditional simple switchers are gradually unable to meet bandwidth and routing requirements, prompting system integrators to adopt matrix solutions with scaling and multi-format support. In terms of cost and competition, AV-over-IP solutions are creating some pressure on large hardware matrices in some new projects, leading the latter to emphasize the advantages of 'low latency, determinism, and plug-and-play' in high-end projects, while maintaining competitiveness in small and medium-sized projects through increased integration and cost optimization. Fluctuations in upstream chip and PCB prices, and delivery uncertainties during periods of supply chain tension, will also temporarily affect shipping schedules and profit margins. Overall, modular matrix switches remain one of the core forms of 'physical signal routing' in many meeting and multimedia scenarios. Despite the rising penetration of AV-over-IP, small and medium-sized scenarios with multiple interfaces and high demands for determinism and reliability will continue to rely on this product category in the long term. The market structure will show a structural evolution of 'high-end evolving towards networking and platformization, while mainstream engineering continues to be centered around multi-format matrices.'
