Modular Rainwater Tank is a modular rainwater collection and storage device used to collect and store rainwater for later use. It is made up of multiple modules, each with a certain capacity, which can be combined to form water storage systems of different sizes.

This device can be installed above roofs, garages, and other buildings, and rainwater is collected into the storage system through pipes. Collected rainwater can be used for

non-potable water needs such as watering gardens, flushing toilets, and washing cars. Using rainwater can save tap water, reduce dependence on water resources, and also help reduce the amount of rainwater discharged into the sewer system, reducing the pressure on urban drainage systems.
