Modular steel construction is a construction method that uses prefabricated steel structural modules to construct buildings. This approach breaks down the construction process into modular parts, pre-produced in factories and then assembled on site. Each module typically includes structural steel framing, wall panels, roofing, and other components, and can include installed equipment, plumbing, and electrical systems. The modules are manufactured with precision and quality control in the factory and then transported to the site for rapid assembly. Modular steel structure buildings have the advantages of speed, flexibility, cost and resource saving, so they are widely used in commercial, industrial, residential and public buildings and other fields.

The global Modular Steel Construction market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
