Modular Toilet for Train refers to a pre-fabricated sanitary unit designed specifically for railway vehicles, where the toilet, water system, waste collection system (such as vacuum or bio-toilet), electrical control system, ventilation, and interior structure are integrated into a standardized module. The module is manufactured and assembled in a factory and then installed directly into the train during vehicle manufacturing or refurbishment, which improves installation efficiency, reduces maintenance time, and ensures consistent quality and hygiene standards. It is widely used in high-speed trains, metro systems, intercity trains, and long-distance passenger trains.

The upstream of Modular Toilet for Train includes stainless steel structures, composite materials, vacuum toilet systems, water tanks, pumps, control systems, sensors, valves, and ventilation components. Midstream manufacturers integrate these components into modular toilet units and supply them to rolling stock manufacturers or railway operators. The downstream mainly includes high-speed trains, metro systems, intercity trains, and railway refurbishment projects, with demand driven by new train procurement and existing fleet retrofitting for environmental and sanitation standards.
