The global Module Level Circuit Breaker market size is predicted to grow from US$ 980 million in 2025 to US$ 2367 million in 2032; it is expected to grow at a CAGR of 13.7% from 2026 to 2032.

A module level circuit breaker is an electrical protection device used in photovoltaic systems. Its main function is to electrically isolate and shut down each photovoltaic module or string independently. It can quickly cut off the flow of current in the event of a fault, maintenance, or system debugging to prevent safety risks such as electrical fires and electric shocks. By providing a single-module-level power-off function, a module level circuit breaker improves the safety and reliability of the photovoltaic system, especially in distributed photovoltaic systems, and can effectively enhance the system's maintenance and emergency handling capabilities.

United States market for Module Level Circuit Breaker is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
