Moissanite is a gemstone born from the stars. It was first discovered in 1893 by a French scientist named Henri Moissan, who later won the Nobel Prize in Chemistry. He discovered microscopic particles of the gem that would eventually bear his name in Arizona, in a crater created by a meteorite that fell to Earth. He initially thought that he had discovered diamonds, but later determined that the crystals were composed of silicon carbide.

Natural moissanite is incredibly rare, so moissanite available today is laboratory-created. Moissanite is engineered to give the illusion of similarity to diamonds, but is compositionally and visually quite different from a real diamond. The durability, brilliance, and color of the two gems are quite distinct.

Global Moissanite key players include Charles & Colvard, Unimoss, Amora, Viktor K?mmerling, Wuzhou Changsheng Gems, etc. Global top five manufacturers hold a share over 85%.

US is the largest market, with a share about 90%, followed by Europe and China, both have a share over 5%.

In terms of product, Round Brilliant is the largest segment, with a share over 80%. And in terms of application, the largest application is Rings, followed by Earrings, Pendants, etc.
