Moisture content testers are precision instruments used to measure the water vapor permeability of materials under specific temperature and humidity conditions. They are widely used in packaging, textile, and pharmaceutical industries. Their core function is to evaluate the water vapor barrier properties of materials and help determine whether they are suitable for applications with high requirements for moisture resistance, freshness preservation, or breathability. Common measurement methods include infrared sensing, electrolysis, and weighing. Moisture content testers have the characteristics of high sensitivity, good stability, and easy operation. They can simulate the performance of materials under different temperature and humidity environments and provide accurate and reliable data support
