Moisture-proof powdered sugar is a kind of powdered sugar with moisture-proof properties. It is mainly used for surface decoration of baked goods, such as cakes, biscuits, etc. It is sifted on the surface of the product through a sieve and different types of molds, presenting a pure white and beautiful decorative effect. The main ingredients of moisture-proof powdered sugar include white sugar and a starch mixture (generally corn starch). Specifically, powdered sugar is a powder made by grinding white sugar or crystal sugar, while moisture-proof powdered sugar is a powder made by adding a certain proportion of starch (about 3%~10% corn starch) to this. The addition of this starch makes the powdered sugar less likely to coagulate and has a better moisture-proof effect. Moisture-proof powdered sugar is widely used in the baking field, especially in the production of cakes, biscuits, desserts and other foods, and is often used as a surface decoration material. In addition, moisture-proof powdered sugar can also be seen in some food packaging that needs to be kept dry and beautiful.
