The global Moisture Sorption Polymer Films market size is predicted to grow from US$ 3813 million in 2025 to US$ 5971 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2024, global production of Moisture sorption polymer films reached approximately 3330 kilotons, with an average global market price of around USD 1100 per ton. Moisture sorption polymer films are engineered polymeric materials designed to absorb, retain, or release water vapor depending on environmental humidity, making them useful for applications requiring controlled moisture management. These films are typically fabricated from hydrophilic polymers or polymer blends that exhibit selective permeability, allowing them to regulate water content through sorption and desorption processes. Their performance depends on polymer chemistry, film thickness, and structural characteristics, enabling applications in food packaging for shelf-life extension, biomedical devices for moisture regulation, electronics protection, and controlled drug delivery systems where stability against humidity fluctuations is critical.

United States market for Moisture Sorption Polymer Films is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
