The global Mold Heater Plate market size is predicted to grow from US\$ 4681 million in 2025 to US\$ 8659 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

A mold heater plate is a device used to raise and control the temperature of molds, typically installed on molds in injection molding, die casting, EVA/PE molding, and other production lines. It transfers heat to the mold surface through electric heating, oil/water circulation, or other heating methods, improving material flow, enhancing product quality, and shortening production cycles. Mold heater plates are considered essential auxiliary equipment in industrial molding processes. In 2025, global mold heating plate production reached approximately 2.59 million units, with an average global market price of around US\$ 1,850 per unit. Annual production capacity is 2.75 million units. Gross Profit Margin: 28%. The mold heating plate industry chain is relatively mature and structured, spanning upstream raw material suppliers, core component manufacturers, equipment assemblers, and downstream end users. Upstream primarily includes high-quality metals, heating elements, and temperature sensors, while midstream focuses on the assembly of heating plates, mold controllers, and integrated hot-runner systems. Downstream covers injection molding factories, automotive, packaging, and electronics sectors, where precise temperature control is critical for product quality. Strong coordination across these stages ensures efficiency and consistent product performance. The mold heating plate market presents stable growth opportunities due to rising demand for precision molding, high-performance plastics, and multi-zone temperature control systems. Chinese manufacturers are increasingly competitive globally, providing cost-effective solutions while maintaining quality standards. I believe continued innovation in heating efficiency, digital temperature control, and modular design will be key differentiators, helping companies capture both domestic and international markets.
