A composite mold release agent is a substance applied to molds used in composite manufacturing processes to prevent the composite material from sticking to the mold surface during curing or molding. These release agents can come in various forms such as liquids, semi-liquids, or sprays, and they create a barrier between the mold and the composite material, facilitating easy removal of the finished part from the mold without damage. Composite materials, such as fiberglass, carbon fiber, and various resins, are widely used in industries like aerospace, automotive, marine, and construction due to their lightweight and high-strength properties. However, one challenge in working with composites is ensuring that the finished parts can be removed from the molds without causing any damage or distortion.

The global Mold Release Agent for Composite Materials market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
