The global Molded Glass Lens market size is predicted to grow from US\$ 1752 million in 2025 to US\$ 3213 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

Molded Glass Lens refer to lens products made from optical glass as raw material, which are softened by precision heating and pressed into high-precision molds in one go. After forming, they are combined with annealing, precision machining and coating processes to achieve the required curvature, surface shape accuracy and surface quality. They can be made into spherical, non spherical and composite curved surfaces. The core advantages are good dimensional consistency, high mass production efficiency, low installation and adjustment costs, and better temperature, humidity and aging stability than most plastic lenses. Therefore, they are widely used in scenarios such as mobile phones and consumer electronics camera modules, car cameras and driving assistance, laser emission and reception optics, projection and imaging modules, industrial sensing and some medical optics. In 2025, global Molded Glass Lens production reached approximately 110 M Pcs, with an average global market price of around US\$ 16.24 per Pcs.

The demand for glass molded lenses is driven by high pixel miniaturization lenses, vehicle mounted multi camera and high reliability requirements, and increased penetration of lasers and sensors. The competition focus on the supply side is shifting from simply expanding production capacity to mold and molding process capabilities, yield and consistency management, material system and supply guarantee of high refractive index and low dispersion glass, as well as coating and modular delivery capabilities. At the same time, the continuous demand for lightweight and low-cost downstream will promote layered competition between glass molding and plastic non spherical surfaces in different focal lengths and temperature conditions. Manufacturers who can establish barriers in high-precision surface shape control, low defect surfaces,

stable batches, and rapid collaborative development are more likely to obtain long-term project shares and premiums from high-end customers.
