The global Molded Infrared Aspherical Lens market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Infrared Molded Glass Aspheric Optics combine the benefits of moldable infrared chalcogenide glasses and the expertise of Rochester Precision Optics' molding technology. Due to the rapid growth of the infrared industry and the near universal use of germanium in IR systems, the demand for germanium has greatly increased. This demand has resulted in higher prices and limited supply. Molding allows volume optical manufacturing without the high cost of capital equipment and skilled labor. IR glass offers excellent part to part uniformity, with lower manufacturing and material costs. The glass also offers a low thermal change in refractive index ($32.2 \times 10^{-6}/^{\circ}\text{C}$ for IRG26), which is a benefit to optical systems designers in avoiding thermal defocusing.

United States market for Molded Infrared Aspherical Lens is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Molded Infrared Aspherical Lens is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Molded Infrared Aspherical Lens is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
