Molded reed switch is an electromagnetic switch component that uses a plastic or epoxy resin mold to encapsulate the traditional glass-encapsulated reed switch. By providing a molded shell that is impact-resistant, moisture-proof and mechanically supported on the reed leads and contacts, it not only retains the high sensitivity and low leakage current characteristics of the reed switch, but also significantly improves the vibration resistance and environmental stress resistance. It is widely used in consumer electronics, automotive safety sensing, industrial automation and building security.

United States market for Molded Reed Switch is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Molded Reed Switch is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
