The global Molded Transformers market size is predicted to grow from US$ 4938 million in 2025 to US$ 6742 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

Molded Transformers are transformers that encapsulate the windings and core in epoxy resin or other insulating materials. This design gives the transformer higher mechanical strength, better insulation performance and longer service life. The encapsulation of epoxy resin or other insulating materials gives the transformer high mechanical strength and can withstand shock and vibration during transportation and installation. The encapsulation material has high dielectric strength, which can effectively prevent short circuits and leakage, and improve the operating safety of the transformer. Molded transformers are widely used in power systems, industrial equipment and special environments.

United States market for Molded Transformers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Molded Transformers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
