The global Molds for Glass Lenses market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The high precision of optical molds is mainly achieved by high-precision mold design and mold processing equipment. The mold can mainly ensure the surface shape accuracy, eccentricity and surface finish of the formed lens. The surface shape accuracy P-V of the optical lens after molding can reach ± 0.1 to $\pm 0.5\mu\text{m}$, dimensional accuracy and eccentricity can reach less than $2\mu\text{m}$. The precision of the mold itself is higher. For example, the dimensional accuracy of the mold core itself is less than $0.5\mu\text{m}$. This report studies molds for glass lenses.
