Molecular diagnostics is the application of medical and microbiological technologies to the medical imaging science, in order to analyze biological markers present in the proteome and genome, which also includes the study of how an individual express his/her genes as proteins. The is an important diagnostic and patient monitoring technique, which not only diagnose the disease but also access the risks involved in treatment and suggest suitable therapies for the patients. Nucleic acid test, or nucleic acid amplification test (NAT/NAAT) is another molecular technology used in identification of a bacterium or virus. NAT comprises of all the tests and technologies used to identify genetic material of infecting virus or organism.

At present, the North American region is the most prominent market, owing to extensive

diagnostic practices and R&D. However, Asia-Pacific and some countries in RoW region are expected to show very lucrative growth in the upcoming period, owing to enhanced awareness and growth in research and diagnostic technologies.
