The global Molecular Interaction Instrument market size is predicted to grow from US\$ 271 million in 2025 to US\$ 405 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

In 2024, the global production of molecular interaction analyzers (MIDs) reached 665 units, with an average selling price of US\$395,000 per unit. The annual production capacity of a single MID production line is approximately 60 units, with a gross profit margin of approximately 30.2%. A MID is a scientific instrument used to study and measure interactions between molecules. It is commonly used in life sciences, materials science, and chemistry to help researchers understand how molecules interact, bind, and influence each other's properties. Molecular interactions can be of various types, including protein-protein, protein-nucleic acid, and ligand-target interactions. Upstream raw materials for MIDs include high-end microscopy systems, microfluidic chips, and specialized algorithm software. The midstream consists of MID manufacturers, while the downstream primarily comprises hospitals, research institutions, and pharmaceutical companies.

The market for molecular interaction analyzers is currently experiencing rapid growth and expanding applications, driven by increasing demands for high sensitivity, real-time performance, and multi-parameter detection in fields such as drug discovery, materials science, biodiagnostics, and educational research. Key driving factors include the need for high-resolution characterization of force field control and single-molecule/multi-molecule interactions, as well as the integration trend of various nanomaterials, microfluidics, and high-throughput technologies. The market landscape features both research/industrial-grade hardware manufacturers and platform-based solution providers. Products are expanding from desktop research-grade to pilot-scale,

preclinical, and clinical applications, requiring solutions to challenges such as cost, ease of use, data analysis capabilities, standardization, and compliance. Simultaneously, differentiated competitive advantages must be established in areas such as training, service, and data accumulation.
