Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Molecular Sieve are crystalline, highly porous materials, which belong to the class of aluminosilicates and are available in the form of beads, pellets and powder. These crystals are characterised by a three-dimensional pore system, with pores of precisely defined diameter. The corresponding crystallographic structure is formed by tetrahedras of (AlO₄) and (SiO₄).

The global market for Molecular Sieve for Air Separation is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

Zeolite adsorbents for air separation and other industrial gas plants help improve process economics. The high adsorption capacity and selectivity of these adsorbents can reduce capital and operating costs for plants producing high purity gases such as O₂, N₂, H₂ and CO.
