Molecular sieve catalyst is a type of catalyst that uses molecular sieve as the catalytic active component (or main active component). The early industrial production of ethylbenzene mainly used the highly corrosive AlCl_3 process with serious emissions of three wastes. Since ExxonMobil and Badger developed the non corrosive and pollution-free molecular sieve alkylation technology for ethylbenzene production in 1970, the molecular sieve alkylation technology for ethylbenzene production has made significant progress and become the mainstream technology for ethylbenzene production today.
